1

Water is life, it is energy, it is essential, it is a resource of inestimable value for its peculiar properties and for many other uses and virtues that testify its importance for all of us, for Nature and for all the living beings on Earth. No Water, no Life!

2

And what have we done in the last decades? We wasted and polluted it. Today we talk more and more often about water and climate change, about plastic islands floating in the oceans and about increasingly widespread water scarcity. All this, in addition to having an impact on the habitat but also negatively affects people.

3

Understanding the importance of water for humans, for the Nature and for all other living beings on Earth is therefore essential to start respecting this precious resource, the Blue Gold which risks becoming increasingly scarce.

The H2O collection is a tribute to an essential element for LIFE. I have always loved water in all its forms and experimenting in creating jewels that can remember them is an amazing challenge .

# H2O COLLECTION

It's composed by...

- BRACELETS | 8 MODELS
- PENDENTS AND NECKLACES | 31 MODELS
- EARRINGS | 37 MODELS
- RINGS | 105 MODELS
- BROOCHES | 1 MODEL

# Lab EG

## Where ?

My laboratory is based in Lodi, not far from Milan.

It is a small world linked to tradition; I search for beauty and create jewels that can give emotions to those who choose and wear them. Each piece of jewelry will be unique, often created on commission.

From attending the Goldsmith School I learned the fundamental techniques and then applied them ... in my own way, always experimenting and searching for new, very personal ways.

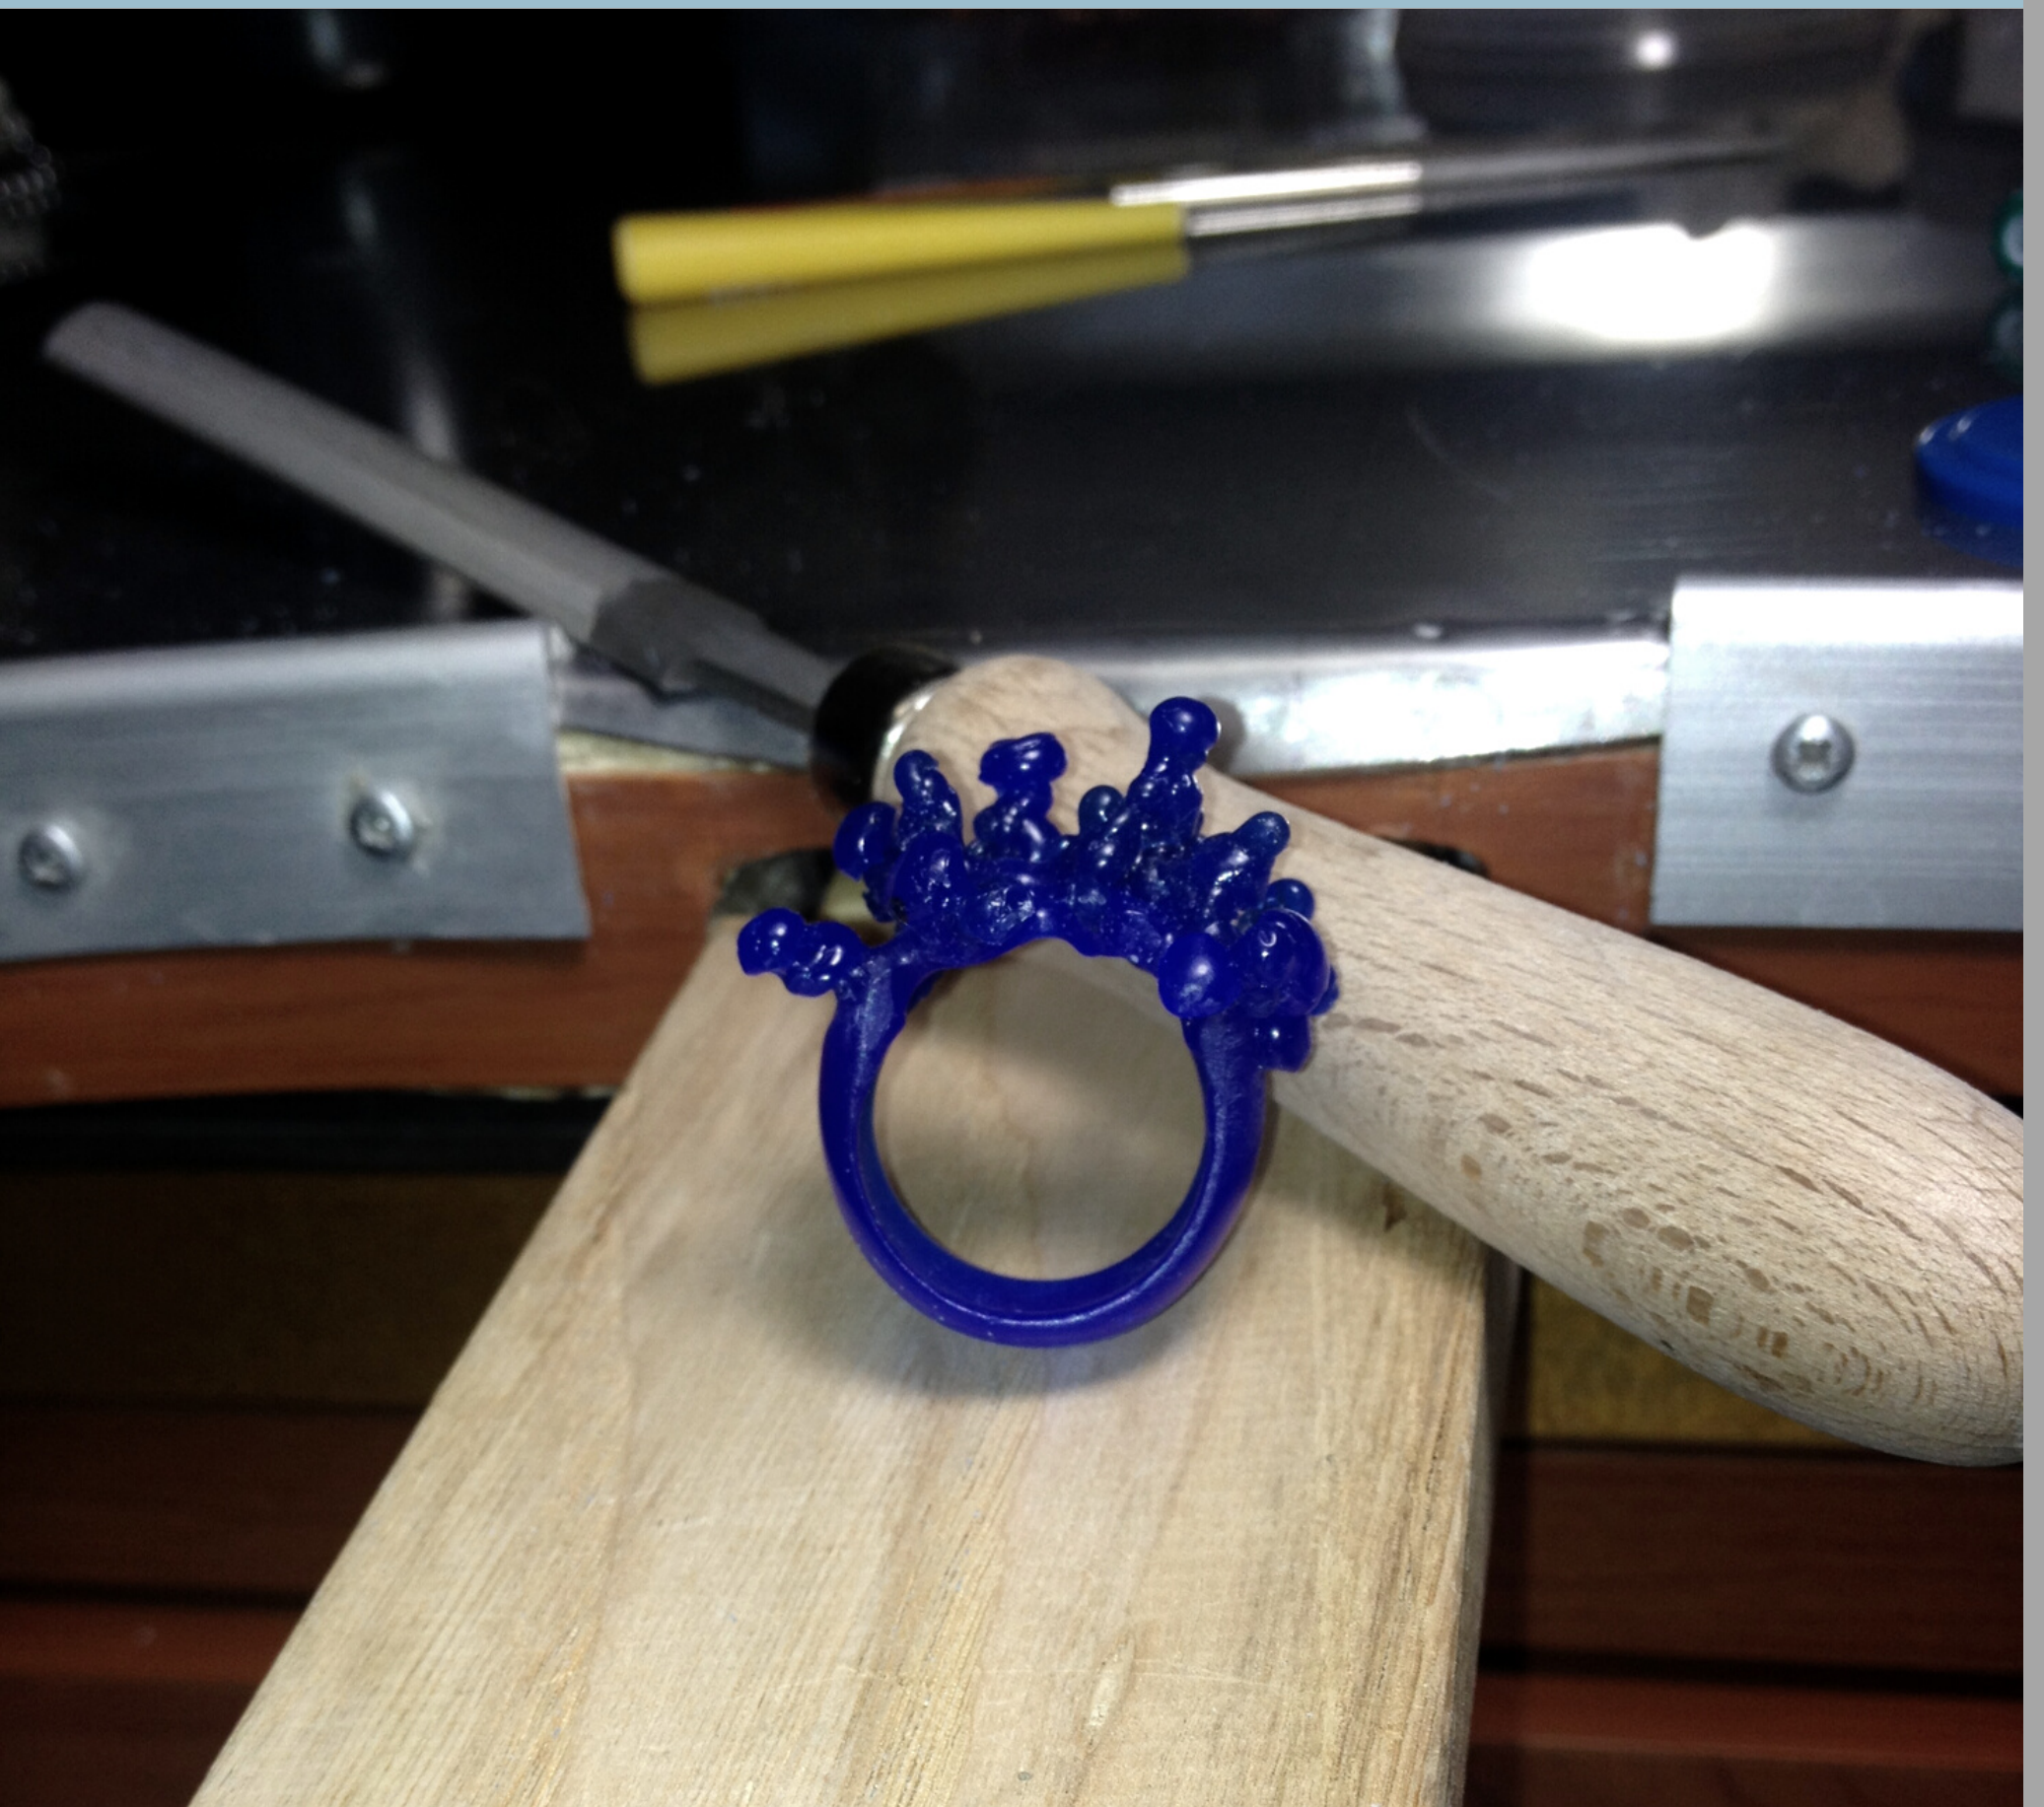

# The technique

EG jewels are created using the ancient goldsmith technique of lost wax.

This technique consists in creating a jewel using wax, a material that allows it to be modeled according to your needs. Imagine a wax that is less oily and more compact than that used for candles. By means of cutters, scalpels, files, drills it is modeled and allows to create very significant details.

Once the model is finished, it is taken to a casting center and ... the magic happens! After the metal is melted, I finish the jewel with a hacksaw, files, sandpaper and drill and if the design requires it, I enamel, oxidize it or insert gems or pearls.

# EG Jewels

The EG collections are present in stores in Italy and abroad.

The demand is constantly growing, anyway an EG jewel will always be ... unique!

If you have a shop and are interested, please contact us.

# EG jewels NOT are for you if...

- YOU WANT A SIMPLE COMMON JEWEL
- IF YOU DON'T WANT TO BE AMAZED AND EXCITED
- IF YOU WANT MASS-PRODUCED JEWELS
- IF YOU WANT A JEWEL THAT SAYS NOTHING ABOUT YOU
- IF YOU DON'T FEEL AS AN UNIQUE PERSON (LIKE THE JEWEL YOU ARE GOING TO WEAR)

If you recognize yourself in these  
desires  
NOT  
choose an EG jewel

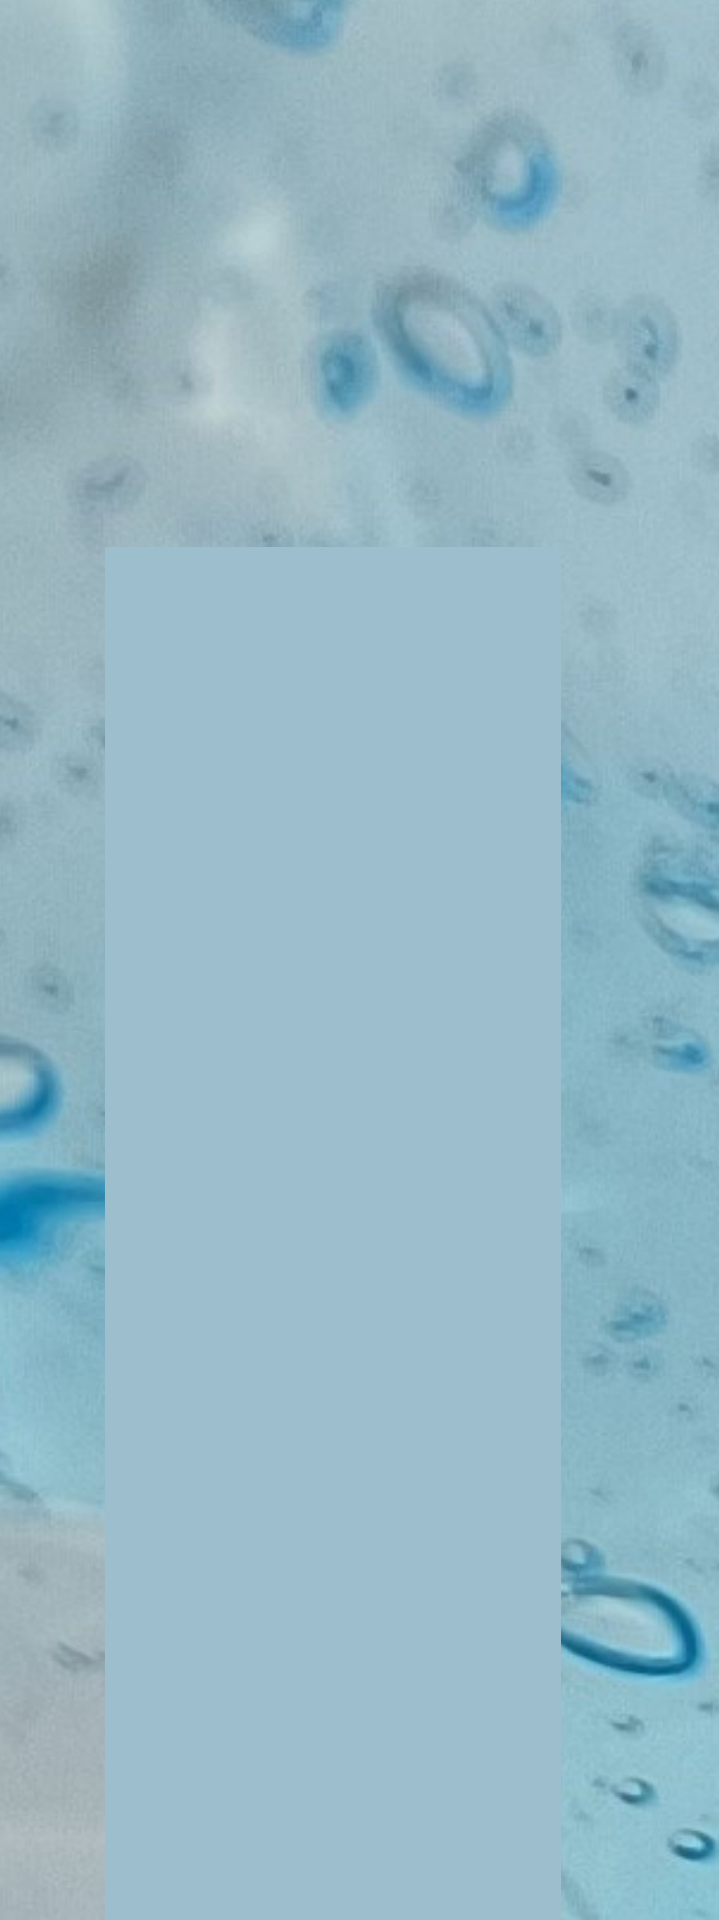

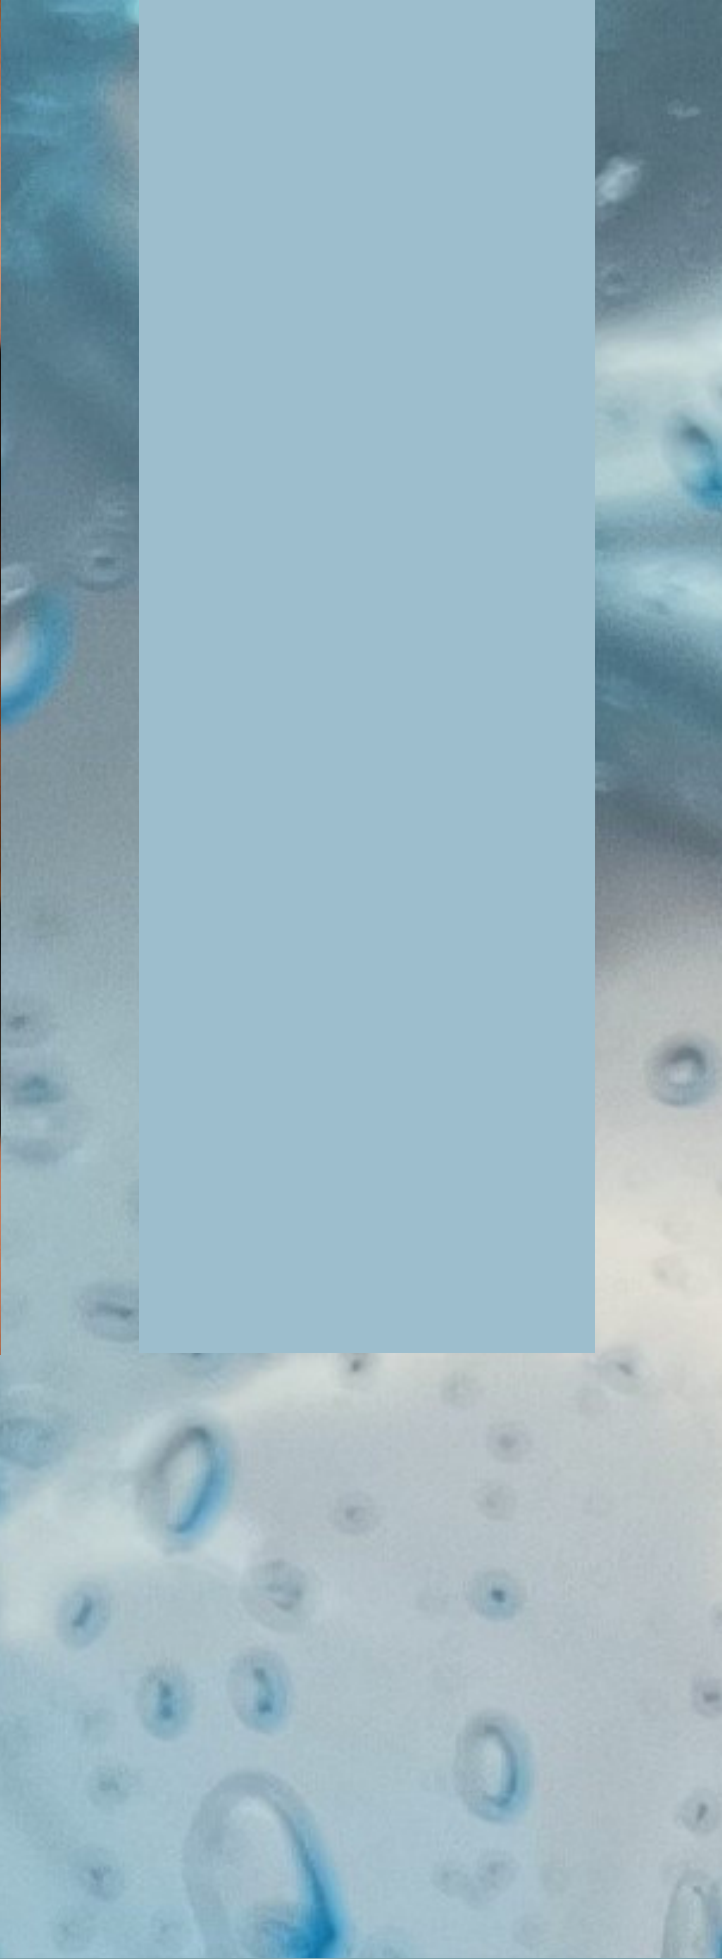

Water is the matter of life.  
It is matrix, mother and resource.  
There is no life without water.  
(Albert Szent-Gyorgyi)

# EG jewels: posh and smart!

## Unique

EG jewels are always unique, any small irregularities are a further guarantee of the craftsmanship of the creation.

## Hypoallergenic

The metal alloys used for the realization are absolutely Made in Italy and they don't contain nickel and zinc.

## Light

Each jewel is designed and realized to be easy and pleasant to wear but stylish at the same time.

## Sustainable

Since 2012 I use recycled paper for packaging; the perfume contained in the box is created with natural methods.

# What distinguishes an EG jewel

## H2O COLLECTION

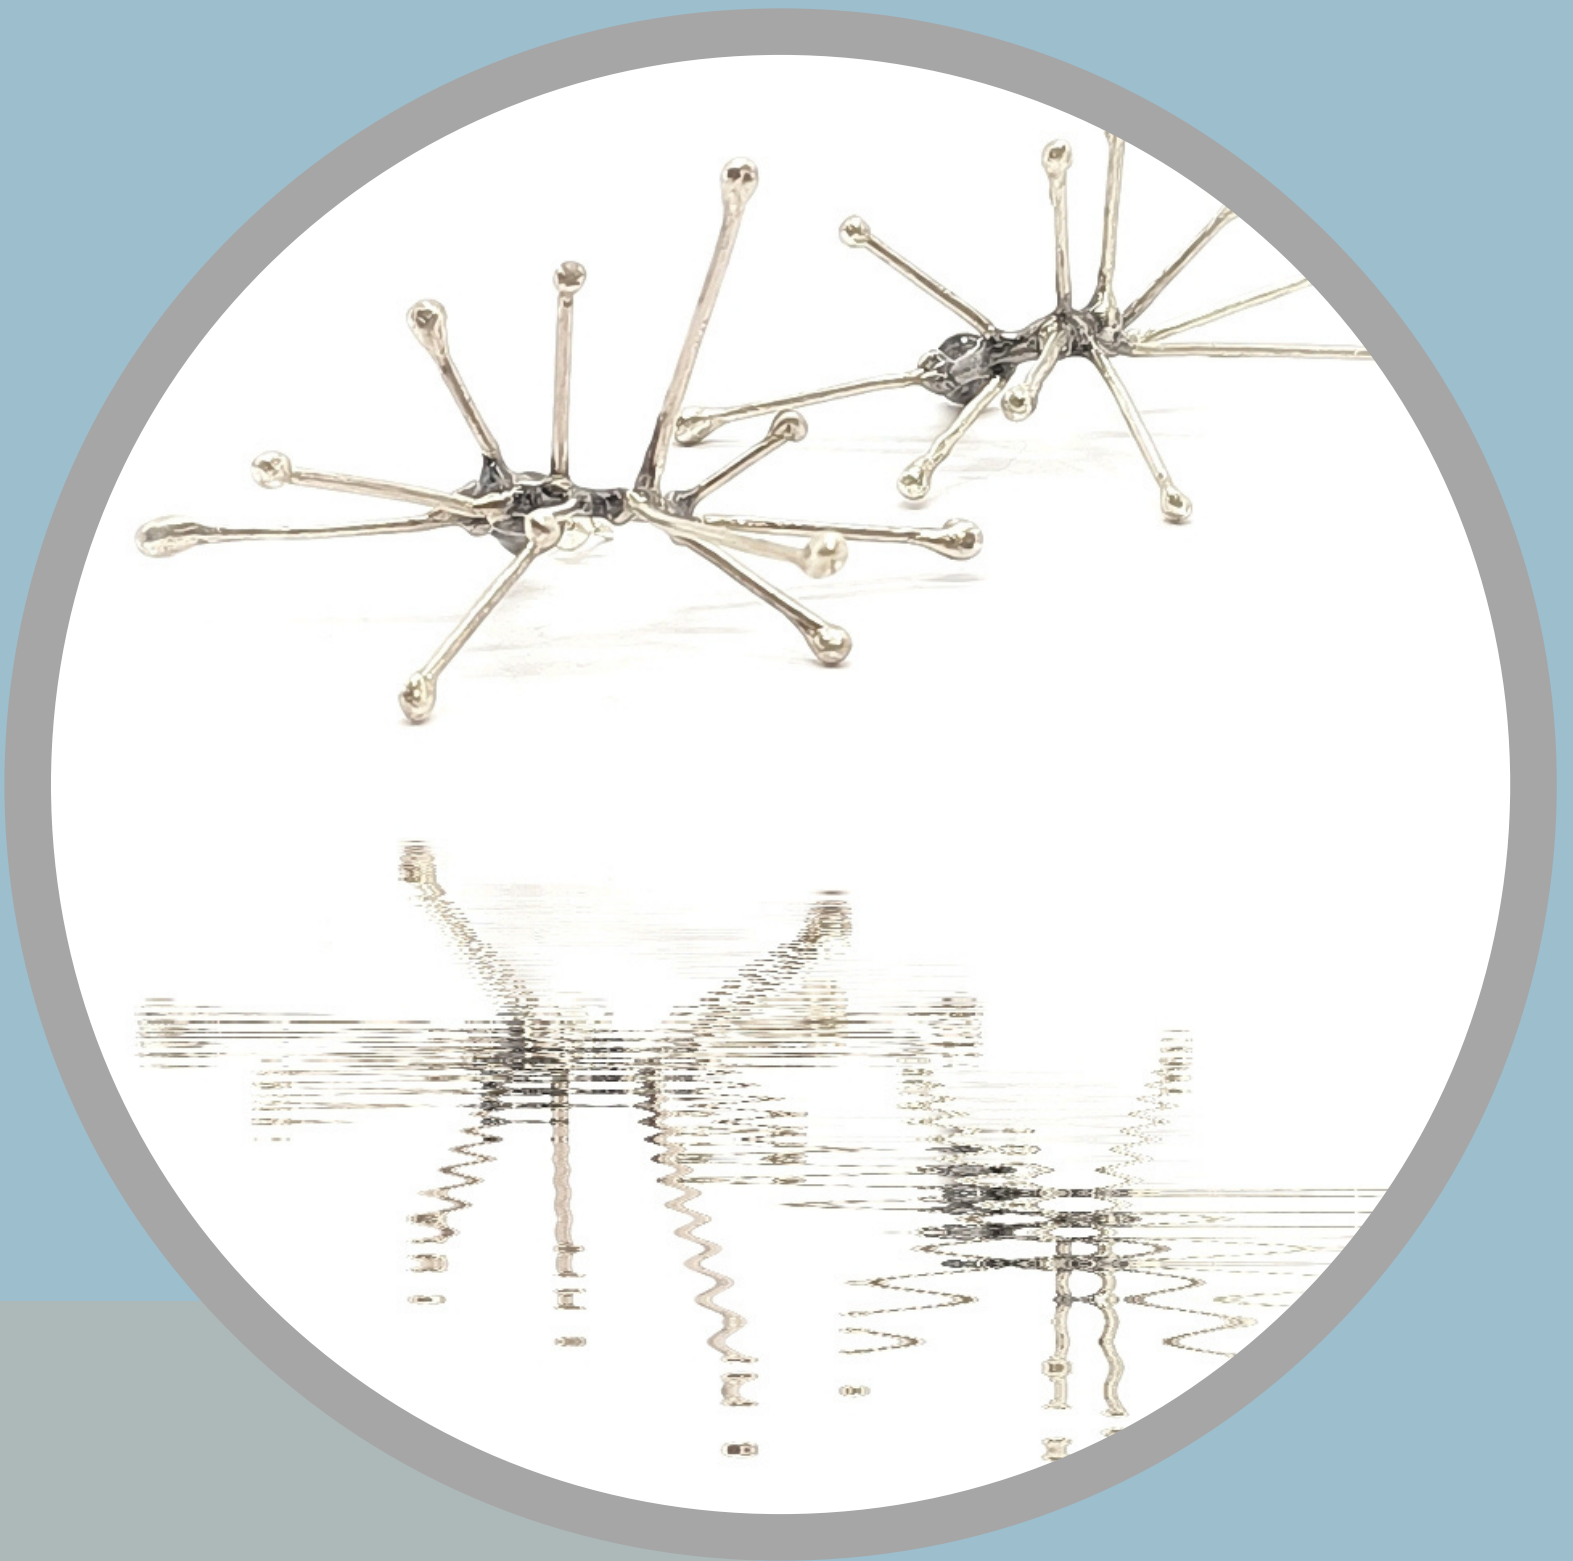

In a standardized world, my "mission" is to create emotions to wear, to understand the real handmade work, the value of a unique piece and to stimulate people to express their personality, which is an act of love towards themselves: it is wonderful to compare eachself with our own tastes and satisfy them making the jewel a perfect completion of own personality and not just a mere ornament.

# Who I am

I love travel, animals, nature in  
all its forms.

Water has always fascinated me.

I am enchanted to observe the waves,  
raindrops on glass,  
the dance of a waterfall ...

Create a collection dedicated to  
water shapes is a difficult and stimulating  
challenge:  
to try to reproduce shapes of moving, fluid  
drops, I have patented  
a new way of modeling wax  
to make my jewels.

Each jewel is rigorously unique: it is  
impossible to reproduce the same drops,  
the movement of certain shapes.

H2O is a collection dedicated to women  
and men who do not follow fashions, but  
only their personal taste and research  
of beauty.
